

COMP47670 Assignment 1 - Grading Rubric

Assignment is worth 20% of overall module grade

Task	Requirements	Mark
#1: Data Collection	- Scraping code correctly collects all data from the chosen data source. - Raw data is parsed appropriately. - Data is saved in an appropriate format for use in Task 2.	15
	- Approach to collecting the data, challenges encountered, and decisions made are clearly discussed.	10
#2: Data Preprocessing	- Raw data is correctly loaded and structured into an appropriate Analytics Base Table (ABT). - Data quality issues are identified and appropriate preprocessing steps are applied. - Cleaned ABT is saved appropriately for use in Task 3.	20
	- Preprocessing decisions are discussed and justified, including why one approach was chosen over alternatives. - Specific data quality issues found in the student's own data are referenced.	10
#3: Data Analysis	- Analysis is appropriate, relevant, and well-structured. - Visualisations are used effectively where relevant. - Analysis is sufficiently thorough to characterise and summarise the dataset.	25
	- Results are interpreted with reference to specific statistics or visualisations produced. - Key insights gained from the analysis are summarised. - Ideas for further work are suggested.	10
General	- Python code quality and notebook structure. - Use of Markdown for interpretation and explanation.	10
